SQUARE COVER DESIGNS

IMPRINTING

AND INDENTATION GUIDELINES:

The cover design guide illustrates where imprinting, cut-outs & indentations can appear on a given cover design. ALL designs can be further restricted by material. Always check to ensure you are selecting a cover material that allows for imprinting or indentations if you wish to use those options.

Also, centered cut-outs & indent cover designs are *visually centered*. This means they are slightly bottom weighted (slightly more space at the bottom than the top) and not exact center.

CUSTOM IMPRINT DIE:

You have the option of creating a completely custom die to be used for imprinting on the cover of select cover designs. The size of the die can be no larger than 2x4 inches (2x3 inches if you want a universal die for albums & totes) and follow the same directions as creating a studio die.

Custom imprinting dies can be used on plain cover designs and stripes (providing an appropriate cover material that allows imprinting is chosen).

Custom imprint dies will either be visually centered on the cover or centered within the accent stripe.

Custom imprint dies **MUST** remain in the accent stripe. You will need to adjust your design accordingly depending on if you are working with a horizontal or vertical stripe.

Why can't I do type set imprinting on a stripe?
Simply put, there are too many variables into allowing type set imprinting on a stripe. With a custom die, we can control the size up front and know that any design created within the template will always fit.

IMPRINTING DESCRIPTIONS:

LRC - lower right corner

This means that your type set imprinting will appear in the lower right hand corner of the cover at least 1 inch from the bottom or side edges.

VRC - vertical centered right

This means that your type set imprinting will appear centered along the right side of the cover. The type will run vertically along the edge of the album at least 1 inch from the cover edge.

VC - visual center

Visually centered, type set imprinting or custom dies are centered slightly above the mid-point of the cover. If there is a cover stripe in the design, the visual center will be centered within the largest part of the main cover material.

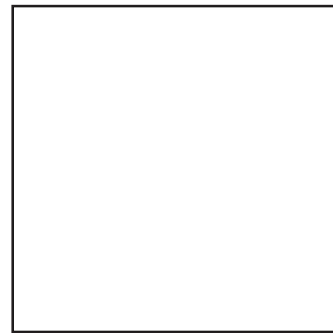

CS - centered on stripe

This means that a custom die can be centered on the stripe accent of the design. The die **MUST** remain fully within the accent stripe. All designs must be orientated correctly.

- All cover designs are subject to change without notice -

RECOMMENDED USES:

This series of cover designs is recommended for any SINGLE material. Please choose from any of the following:

- all leather collections*
- all non-leather collections

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

* Patina is a small hide and may not work on larger album sizes.

RECOMMENDED USES:

This series of cover designs is recommended for any TWO materials, however, the spine should **ALWAYS** be one of our leather options. Use these designs with:

- all leather collections
- all non-leather collections

NOTE: Any cover design that has a spine accent has the option to be a "spine only" accent where the front & back cover materials are the same or a "spine and back" option, where the front material is different and the spine and back materials are the same. Select your choice at the time of order.

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

RECOMMENDED USES:

This series of cover designs is recommended for any TWO of the following materials:

- all leather collections*
- all non-leather collections
- 3Tones! (select designs only)

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

* We suggest selecting a leather option for the spine

HORIZONTAL COVER DESIGNS

IMPRINTING

AND INDENTATION GUIDELINES:

The cover design guide illustrates where imprinting, cut-outs & indentations can appear on a given cover design. ALL designs can be further restricted by material. Always check to ensure you are selecting a cover material that allows for imprinting or indentations if you wish to use those options.

Also, centered cut-outs & indent cover designs are *visually centered*. This means they are slightly bottom weighted (slightly more space at the bottom than the top) and not exact center.

CUSTOM IMPRINT DIE:

You have the option of creating a completely custom die to be used for imprinting on the cover of select cover designs. The size of the die can be no larger than 2x4 inches (2x3 inches if you want a universal die for albums & totes) and follow the same directions as creating a studio die.

Custom imprinting dies can be used on plain cover designs and stripes (providing an appropriate cover material that allows imprinting is chosen).

Custom imprint dies will either be visually centered on the cover or centered within the accent stripe.

Custom imprint dies **MUST** remain in the accent stripe. You will need to adjust your design accordingly depending on if you are working with a horizontal or vertical stripe.

Why can't I do type set imprinting on a stripe?
Simply put, there are too many variables into allowing type set imprinting on a stripe. With a custom die, we can control the size up front and know that any design created within the template will always fit.

IMPRINTING DESCRIPTIONS:

LRC - lower right corner

This means that your type set imprinting will appear in the lower right hand corner of the cover at least 1 inch from the bottom or side edges.

VRC - vertical centered right

This means that your type set imprinting will appear centered along the right side of the cover. The type will run vertically along the edge of the album at least 1 inch from the cover edge.

VC - visual center

Visually centered, type set imprinting or custom dies are centered slightly above the mid-point of the cover. If there is a cover stripe in the design, the visual center will be centered within the largest part of the main cover material.

CS - centered on stripe

This means that a custom die can be centered on the stripe accent of the design. The die **MUST** remain fully within the accent stripe. All designs must be orientated correctly.

- All cover designs are subject to change without notice -

RECOMMENDED USES:

This series of cover designs is recommended for any SINGLE material. Please choose from any of the following:

- all leather collections*
- all non-leather collections

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

* Patina is a small hide and may not work on larger album sizes.

RECOMMENDED USES:

This series of cover designs is recommended for any TWO materials, however, the spine should **ALWAYS** be one of our leather options. Use these designs with:

- all leather collections
- all non-leather collections

NOTE: Any cover design that has a spine accent has the option to be a "spine only" accent where the front & back cover materials are the same or a "spine and back" option, where the front material is different and the spine and back materials are the same. Select your choice at the time of order.

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

RECOMMENDED USES:

This series of cover designs is recommended for any TWO of the following materials:

- all leather collections
- all non-leather collections
- 3Tones! (select designs only)

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

* We suggest selecting a leather option for the spine

BEBBALICIOUS COVER UPGRADE:

The Bebbalicious cover is a designer album cover inspired by the Bebbs (one of the 10 best wedding photographers in the world).

The Bebbalicious cover is a formica & Armour image panel cover (template required for image panel) that is only available on select sizes, in this case, the 10x15, 12x16 and 12x18 and has the following features:

- choice of leather spine & back
- square, soft spine
- choice of standard or thin pages
- creased print style
- Finao lab printing
- 4 to 5 week production time

All diagrams are approximations and may vary slightly depending on individual album proportions.

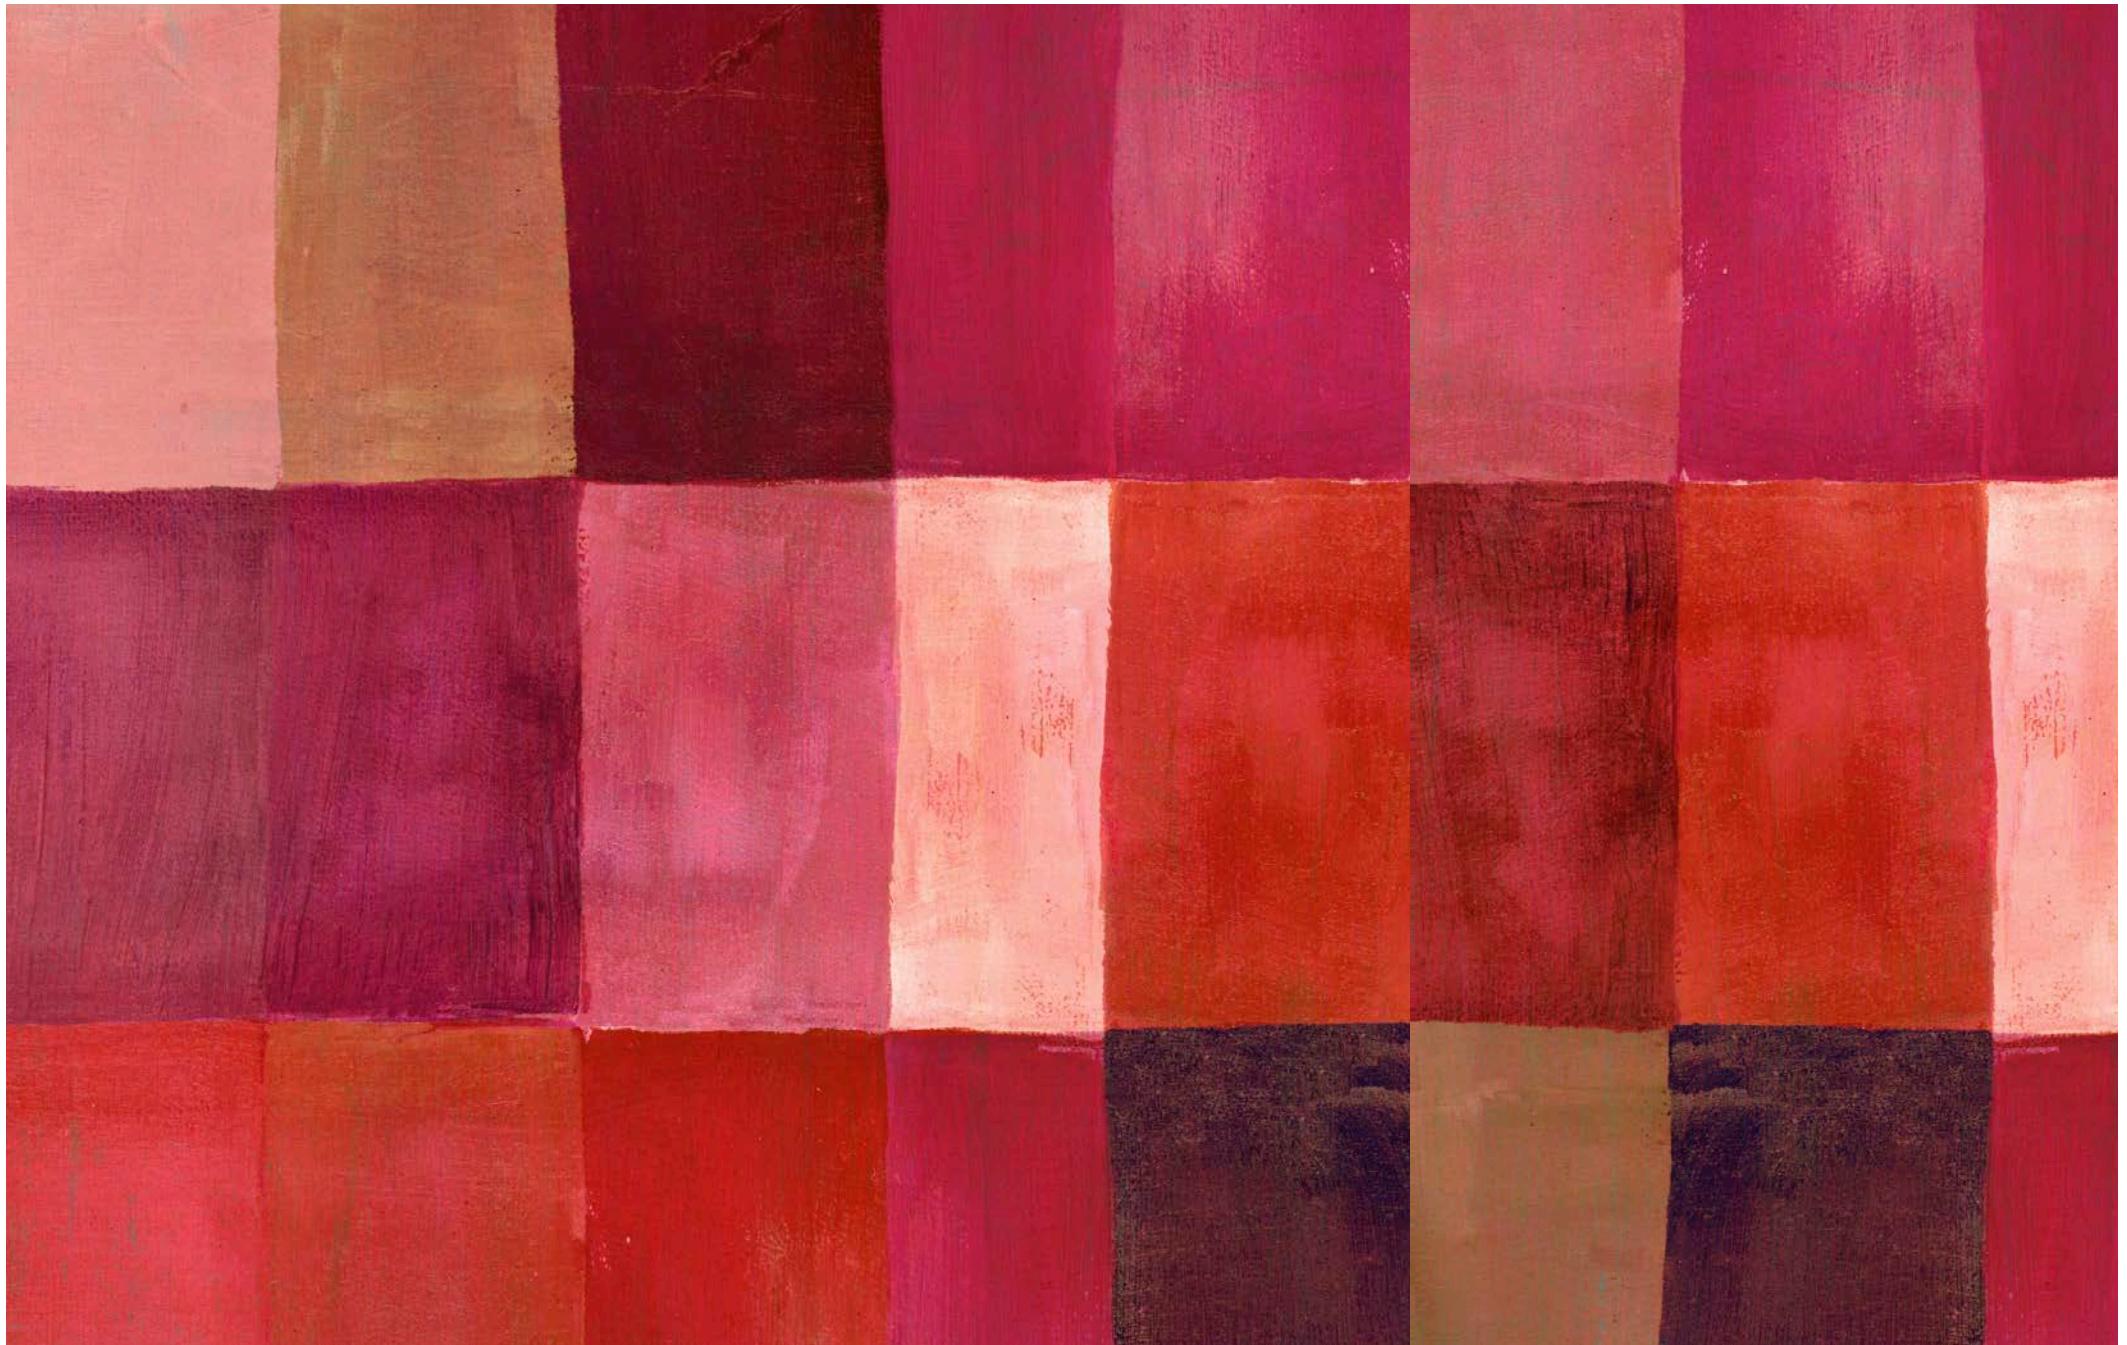

- All cover designs are subject to change without notice -

VERTICAL COVER DESIGNS

IMPRINTING

AND INDENTATION GUIDELINES:

The cover design guide illustrates where imprinting, cut-outs & indentations can appear on a given cover design. ALL designs can be further restricted by material. Always check to ensure you are selecting a cover material that allows for imprinting or indentations if you wish to use those options.

Also, centered cut-outs & indent cover designs are *visually centered*. This means they are slightly bottom weighted (slightly more space at the bottom than the top) and not exact center.

CUSTOM IMPRINT DIE:

You have the option of creating a completely custom die to be used for imprinting on the cover of select cover designs. The size of the die can be no larger than 2x4 inches (2x3 inches if you want a universal die for albums & totes) and follow the same directions as creating a studio die.

Custom imprinting dies can be used on plain cover designs and stripes (providing an appropriate cover material that allows imprinting is chosen).

Custom imprint dies will either be visually centered on the cover or centered within the accent stripe.

Custom imprint dies **MUST** remain in the accent stripe. You will need to adjust your design accordingly depending on if you are working with a horizontal or vertical stripe.

Why can't I do type set imprinting on a stripe?
Simply put, there are too many variables into allowing type set imprinting on a stripe. With a custom die, we can control the size up front and know that any design created within the template will always fit.

IMPRINTING DESCRIPTIONS:

LRC - lower right corner

This means that your type set imprinting will appear in the lower right hand corner of the cover at least 1 inch from the bottom or side edges.

VRC - vertical centered right

This means that your type set imprinting will appear centered along the right side of the cover. The type will run vertically along the edge of the album at least 1 inch from the cover edge.

VC - visual center

Visually centered, type set imprinting or custom dies are centered slightly above the mid-point of the cover. If there is a cover stripe in the design, the visual center will be centered within the largest part of the main cover material.

CS - centered on stripe

This means that a custom die can be centered on the stripe accent of the design. The die **MUST** remain fully within the accent stripe. All designs must be orientated correctly.

- All cover designs are subject to change without notice -

RECOMMENDED USES:

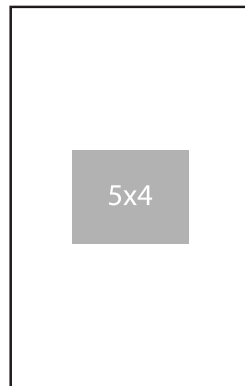

This series of cover designs is recommended for any SINGLE material. Please choose from any of the following:

- all leather collections*
- all non-leather collections

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

* Patina is a small hide and may not work on larger album sizes.

RECOMMENDED USES:

This series of cover designs is recommended for any TWO materials, however, the spine should **ALWAYS** be one of our leather options. Use these designs with:

- all leather collections
- all non-leather collections

NOTE: Any cover design that has a spine accent has the option to be a "spine only" accent where the front & back cover materials are the same or a "spine and back" option, where the front material is different and the spine and back materials are the same. Select your choice at the time of order.

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

BEBBALICIOUS COVER UPGRADE:

The Bebbalicious cover is a designer album cover inspired by the Bebbs (one of the 10 best wedding photographers in the world).

The Bebbalicious cover is a formica & Armour image panel cover (template required for image panel) that is only available on select sizes, in this case, the 10x15, 12x16 and 12x18 and has the following features:

- choice of leather spine & back
- square, soft spine
- choice of standard or thin pages
- creased print style
- Finao lab printing
- 4 to 5 week production time

All diagrams are approximations and may vary slightly depending on individual album proportions.

- All cover designs are subject to change without notice -

IMPRINTING KEY: **LRC** - lower right corner
ALBUM DESIGN KEY: ■ material for spine & back

VRC - vertical right center
■ armour image panel

VC - visual center
■ formica panels

CS - centered on stripe

FLIPBOOK COVER DESIGNS

IMPRINTING

AND INDENTATION GUIDELINES:

The cover design guide illustrates where imprinting, cut-outs & indentations can appear on a given cover design. ALL designs can be further restricted by material. Always check to ensure you are selecting a cover material that allows for imprinting or indentations if you wish to use those options.

Also, centered cut-outs & indent cover designs are *visually centered*. This means they are slightly bottom weighted (slightly more space at the bottom than the top) and not exact center.

CUSTOM IMPRINT DIE:

You have the option of creating a completely custom die to be used for imprinting on the cover of select cover designs. The size of the die can be no larger than 2x4 inches (2x3 inches if you want a universal die for albums & totes) and follow the same directions as creating a studio die.

Custom imprinting dies can be used on plain cover designs and stripes (providing an appropriate cover material that allows imprinting is chosen).

Custom imprint dies will either be visually centered on the cover or centered within the accent stripe.

Custom imprint dies **MUST** remain in the accent stripe. You will need to adjust your design accordingly depending on if you are working with a horizontal or vertical stripe.

Why can't I do type set imprinting on a stripe? Simply put, there are too many variables into allowing type set imprinting on a stripe. With a custom die, we can control the size up front and know that any design created within the template will always fit.

IMPRINTING DESCRIPTIONS:

LRC - lower right corner

This means that your type set imprinting will appear in the lower right hand corner of the cover at least 1 inch from the bottom or side edges.

VRC - vertical centered right

This means that your type set imprinting will appear centered along the right side of the cover. The type will run vertically along the edge of the album at least 1 inch from the cover edge.

VC - visual center

Visually centered, type set imprinting or custom dies are centered slightly above the mid-point of the cover. If there is a cover stripe in the design, the visual center will be centered within the largest part of the main cover material.

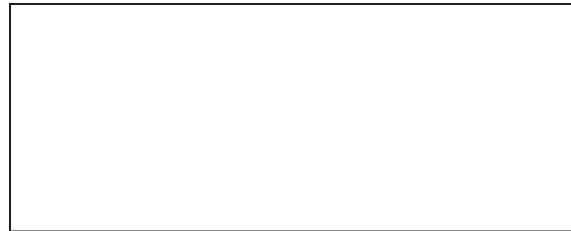

CS - centered on stripe

This means that a custom die can be centered on the stripe accent of the design. The die **MUST** remain fully within the accent stripe. All designs must be orientated correctly.

- All cover designs are subject to change without notice -

RECOMMENDED USES:

This series of cover designs is recommended for any TWO materials, however, the spine must **ALWAYS** be one of our leather options. Use these designs with:

- all leather collections
- all non-leather collections

NOTE: Any cover design that has a spine accent has the option to be a "spine only" accent where the front & back cover materials are the same or a "spine and back" option, where the front material is different and the spine and back materials are the same. Select your choice at the time of order.

All diagrams are approximations and may vary slightly depending on individual album proportions.

See individual materials for imprint and indentation restrictions.

* We recommend a leather for the spine material
